

arriving in p
 (point source):
 $A \Phi_\lambda T_{opt} P_p$
 photon $s^{-1} nm^{-1}$
 extended source:
 $\int I_\lambda P_p d\Omega$ replaces
 $\Phi_\lambda P_p$

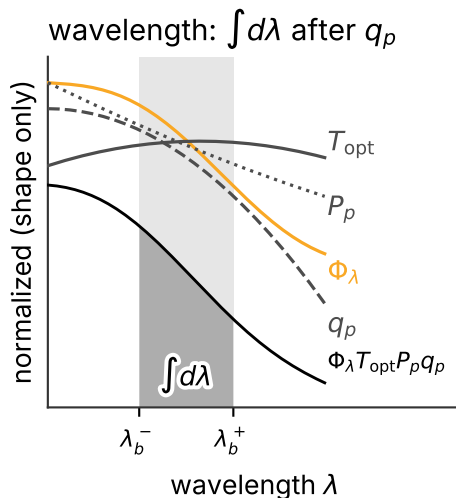

$\times q_p, \int d\lambda$
 $\int_{live} dt$

accumulated in p :
 $\mu_{e,p}$ [electron]

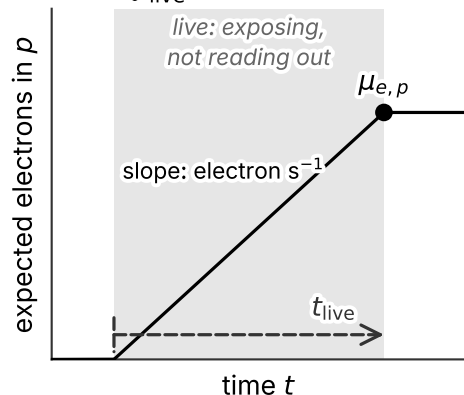

angle: P_p , point source

face-on, one wavelength, log scale:
 the image spreads into neighbors

time: $\int_{live} dt$

schematic, not to scale
