

Roll turns the detector under a fixed sky; active rotation moves the content

(a) roll 0

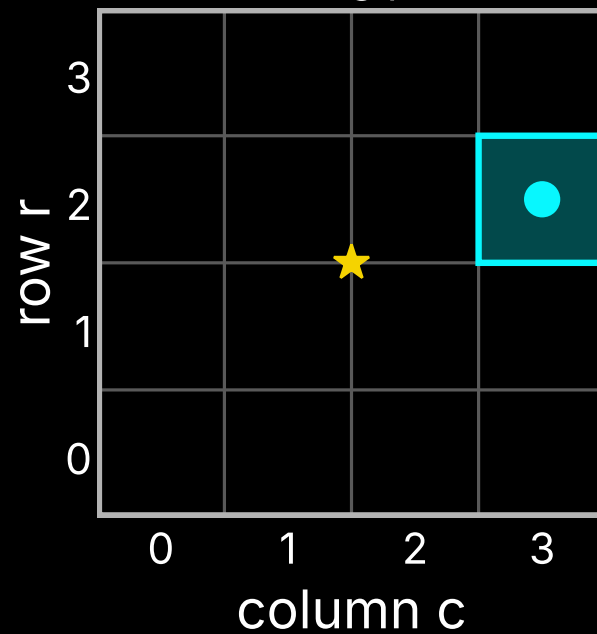

(b) telescope roll $\theta = +90^\circ$

(c) active rotation $+90^\circ$

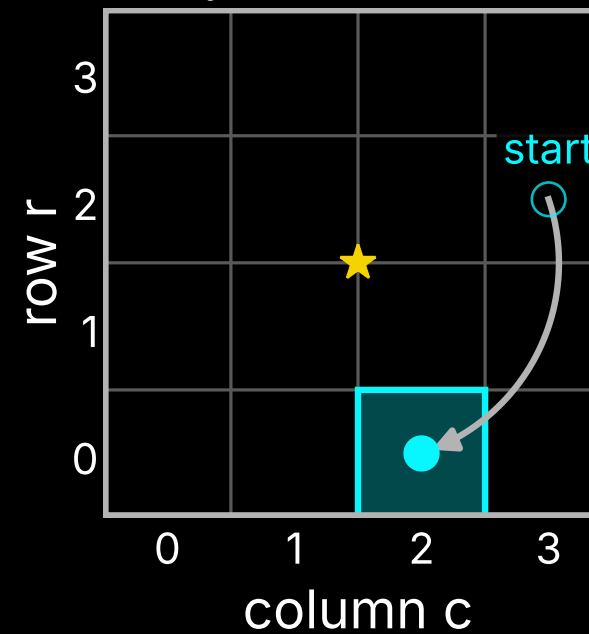

$(r, c) = (2, 3)$
starting pixel

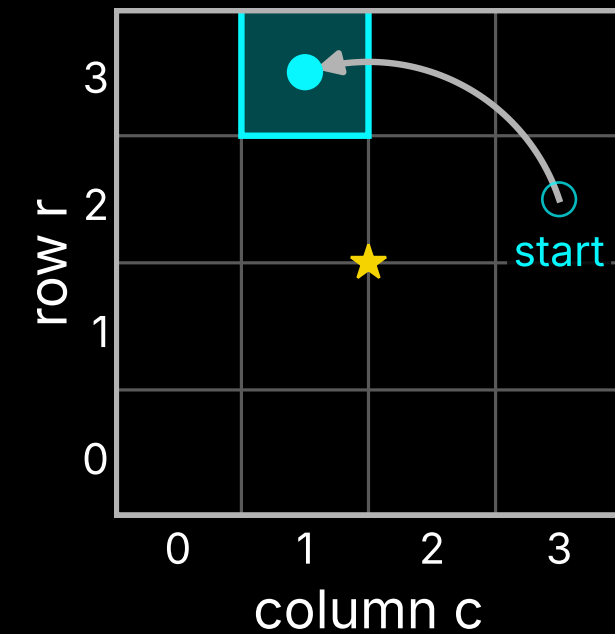

stored array (origin lower)

$(r, c) = (0, 2)$
sky turns clockwise

$(r, c) = (3, 1)$
content turns
counterclockwise

schematic; origin at the grid center; proposed pixel profile; image-coordinate profile pending
