

Which way does the star move when the planet moves toward the observer?

$t = t_0: v_{r,\star} = +K_\star$
quadrature
(half lit)

$t = t_0 + P/4: v_{r,\star} = 0$
planet nearest the observer (+Z)
(dark side to us)

$t = t_0 + 3P/4: v_{r,\star} = 0$
planet farthest (-Z)
(lit side to us)

*proposed observer profile and RV sign (pending); planet disk enlarged
mass ratio exaggerated: drawn $M_p/M_\star = 0.5$ (Earth and Sun: 3.0×10^{-6})*
